Integrated Software and Printing Systems

TAGMaster® 3008n

Tagmaster® TM-3008n Automatic Tagger

The TM-3008n Automatic Tagger, produces an 8.5" wide variable length tag, which is automatically inserted into your bag sewer up to 30 bags per minute.

Wider print area means you get a larger stitch area across the top, a shorter tag, more tags per roll, all with the ability to print directly to the system using a PDF format at a low cost of operation.

The TM-3008n comes with a fully enclosed dust prevention cover that is vertically designed to allow users to fit the machine in small places. Add this to our unique inline trolley system, and you have a system that gives operators easy access to replenish their supplies. Included with the TM-3008n is an industrial dust resistant production floor computer with PDF Plus+ Software pre-installed.

CMSI Technologies continues to provide quality solutions that meet your toughest requirements.

  * TM-3008n is compatible with Trace-It, and Q.A Scan products.
PATENT PENDING

Why YOU would choose the TM-3008n

▲ Digital formats
By using digital formats the TM-3008n allows you to make quick modification when changes arise, and gives your operator the power to add the variable bag counts, best if used by dates, plant codes, company graphics, lot numbering, batch codes and serial numbers all at their fingertips.

▲ Reduced tag cost
By producing tags at the line, on demand, without any additional labor, you print only what you need, which eliminates time, scrap and wasted overruns.
