Beer Can and Bottle Labeling System

This high speed non-stop zero downtime labeling system features servo driven product handling, all overhead electronics, Ethernet connection providing real time system status, & Allen-Bradley® PLC control color touchscreen HMI.

Quadrel's ProLine Wrap Labeling System was designed to provide high speed, zero downtime labeling in harsh, wet environments. Featuring two servo driven applicators designed to accommodate round containers at speeds in access of 300ppm. It is additionally suited for round beverage products such as bottled water or juices.

This premium quality labeling system sets a new standard for pressure sensitive product decoration. The ProLine labeling system was designed specifically for packagers that require globally supported internationally compliant factory standardization.

Features include internationally compliant guarding, servo driven top hold down and labeling stations, non-proprietary Allen-Bradley© PLC control, touchscreen operator interface.
